

## Portable Emergency Console

Similarly to the Bell Handling Control Station ( DG.DS.HS.010 ), the main feature of the Emergency Console is the operation of the handling system, for bell deployment and recovery, plus travel and connection to the chamber complex.

The Portable Emergency Console can be connected to the Bell Handling Control Console through 2 cables fitted with connectors, located under the horizontal shelf of the main console.

CERTIFICATION Det Norske Veritas

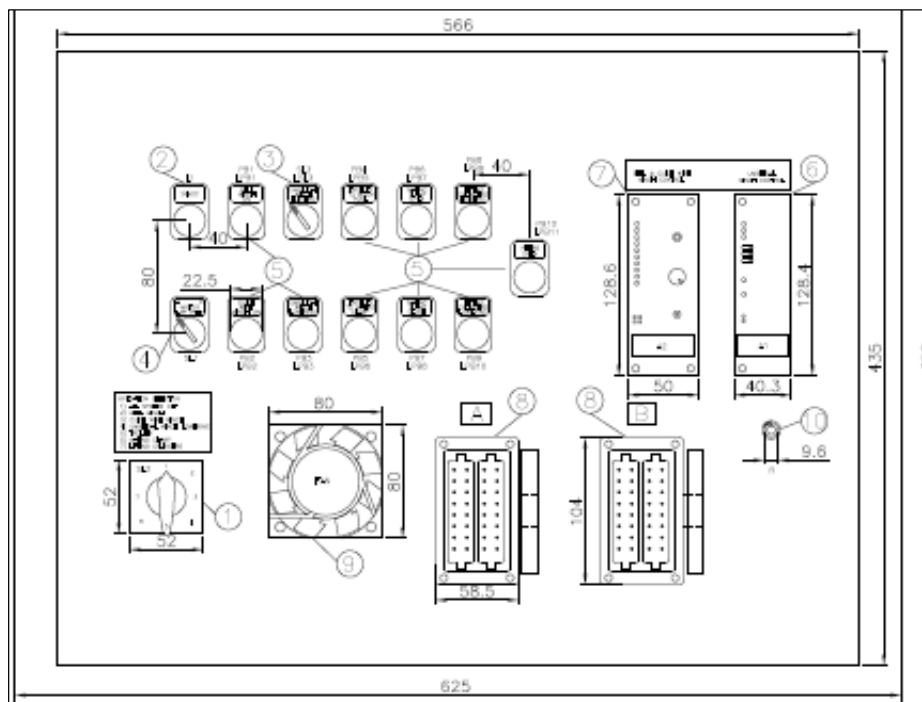

Picture 1. *Portable Emergency Console*

The Portable Emergency Console is contained in a transportable resistant casing.  
The console receives the electrical supply directly from the hydraulic power packs, and its feeders and control cards are independent of the Bell Handling Control Console (DG.DS.HS.010).  
The control logic is based on relays with the aim of increasing operation, maintenance and reliability levels.

The Emergency Console is equipped with 2 proportional boards for the speed control of the winches pulling strength; thanks to this solution it is possible to adjust the winches speed obtaining the same performance of the bell handling control console.

<b><u>Weight and Dimensions</u></b>	
Total Weight	40 Kg
Total Length	630 mm
Total width	500 mm
Total Height	350 mm
